

High Performance Capacitive Sensors

RECHNER SENSORS are now offering an M12 version of their new high performance standard.

The new format is available with an ultra-bright, all round visible LED, and in a chemically resistant housing. The sensors have a medium optimised adjustable sensing distance from 0.5 to 10 mm, and are ideally suited for the detection of aggressive, highly viscous and adhesive media, as well as light bulk materials, such as plastic granules and Cereals.
