

ATEX zone 20 - Capacitive *PerLevel* Level Probe 2 switching points with just one probe!

Rechner Sensors capacitive filling level probes are now available for ATEX zone 20, where there is a danger of dust explosion when working with products such as flour. The medium contacting part of the probe has a PTFE body and the connection head is made of food grade stainless steel. Typical applications for these probes are for level control in the food or pharmaceutical industry. The probe length (from 100 mm up to 2 m) and the position of the switching points are flexible and thus optimised for the client's application.
