

Double Security with RECHNER High Performance Sensors and holders

Rechner High Performance Proximity Sensors provide a specialised solution, compared with other non-high performance sensors.

The user will notice the large sensing distance and the excellent resolution with the adjustment of the sensors. This will benefit the customer with increased switching safety and guaranteed trouble-free production runs.

Rechner Sensors also have intelligent solutions in the accessory sector, for example the **sensor holders** for optimal mounting of tubes or by-pass installations, often applied to level control. These sensor holders are available in PP or PTFE material, and M18 x 1 or M30 x 1.5 body size.
