

Capacitive Proximity Sensors With Triclamp Process Connection For ATEX Zone 20

Great News for the food and pharmaceutical industry. RECHNER-Sensors now offer sensors with a Triclamp process connection for ATEX Zone 20. These capacitive sensors are designed for the level control of bulk materials. It goes without saying that the sensors have PTFE and stainless steel bodies which are allowed to be in direct contact with food and pharmaceutical products. In addition the sensors are suitable for CIP up to 120°C and therefore suitable for in-line cleaning and sterilisation.
